

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

EDITORIAL COMMITTEE : S. NEWCOMB, Mathematics ; R. S. WOODWARD, Mechanics ; E. C. PICKERING, Astronomy ; T. C. MENDENHALL, Physics ; R. H. THURSTON, Engineering ; IRA REMSEN, Chemistry ; JOSEPH LE CONTE, Geology ; W. M. DAVIS, Physiography ; HENRY F. OSBORN, Paleontology ; W. K. BROOKS, C. HART MERRIAM, Zoology ; S. H. SCUDDER, Entomology ; C. E. BESSEY, N. L. BRITTON, Botany ; C. S. MINOT, Embryology, Histology ; H. P. BOWDITCH, Physiology ; J. S. BILLINGS, Hygiene ; WILLIAM H. WELCH, Pathology ; J. McKEEN CATTELL, Psychology ; J. W. POWELL, Anthropology.

FRIDAY, MAY 11, 1900.

CONTENTS:

<i>Report of the Watson Trustees on the Award of the Watson Medal to David Gill</i> : PROFESSOR S. NEWCOMB.....	721
<i>Experience Notes upon Plot Experiments</i> : PROFESSOR BYRON D. HALSTED.....	726
<i>Modern Problems in Acoustics</i> : CHARLES K. WEAD.....	732
<i>Opportunities for Biological Study in Paris and the Requirements for the New Doctorate</i> : PROFESSOR FREDERICK C. NEWCOMBE.....	736
<i>The Senses of Primitive Man</i>	740
<i>Oliver Payson Hubbard</i> : PROFESSOR J. J. STEVENSON, DR. A. A. JULIEN.....	742
<i>Scientific Books</i> :—	
<i>Royce's—World and the Individual</i> : PROFESSOR R. M. WENLEY. <i>A Preliminary Report on the Geology of Louisiana</i> : DR. W. H. DALL. <i>Loew on the Physiological Rôle of Mineral Nutrients</i> : PROFESSOR D. T. MACDOUGAL. <i>Wiechmann's Chemistry, its Evolution and Achievements</i> : PROFESSOR W. A. NOYES.	
<i>Books Received</i>	743
<i>Scientific Journals and Articles</i>	747
<i>Societies and Academies</i> :—	
<i>Biological Society of Washington</i> : F. A. LUCAS. <i>Section of Geology and Mineralogy of the New York Academy of Science</i> : DR. THEODORE G. WHITE. <i>The Academy of Science of St. Louis</i> : PROFESSOR WILLIAM TRELEASE. <i>American Mathematical Society</i> : PROFESSOR F. N. COLE. <i>The New York Section of the American Chemical Society</i> : DR. DURAND WOODMAN	749
<i>Discussion and Correspondence</i> :—	
<i>Physical Observations during the Total Solar Eclipse</i> : A. LAWRENCE ROTCH. <i>The University of Cincinnati</i> : PROFESSOR THOMAS FRENCH, JR. '00 or 1900 : PROFESSOR E. L. MARK	752
<i>Current Notes on Physiography</i> :—	
<i>The Mexican Boundary; Glaciation of Sierra Costa, Cal.; The Trough of Lake Nyassa</i> : PROFESSOR W. M. DAVIS	753
<i>The Making of a Museum</i> : F. A. L.....	755
<i>Scientific Notes and News</i>	756
<i>University and Educational News</i>	760

MSS. intended for publication and books, etc., intended for review should be sent to the responsible editor, Professor, J. McKeen Cattell, Garrison-on-Hudson, N. Y.

REPORT OF THE WATSON TRUSTEES ON THE AWARD OF THE WATSON MEDAL TO DAVID GILL.

AT the last annual meeting of the National Academy of Sciences the Watson medal was, on recommendation of the Trustees, awarded to Dr. David Gill, Her Majesty's Astronomer at the Cape of Good Hope, for his work in perfecting the application of the heliometer to astronomical measurements resulting in an important advance in astronomy of precision especially in the determination of the parallaxes of the sun and stars, and of the positions of the planets. In accordance with our custom I now have the honor to submit a fuller report on the work in question.

It is as true of the astronomer as of the poet that he must be born, not made. Although there is no branch of research in which a wider knowledge of the whole field of physical science and a broader grasp of first principles are necessary than in astronomy, it is none the less true that this knowledge and grasp must be supplemented by that indefinable quality born in the man which leads him to pursue astronomy with zeal and success. The career of our medalist offers a remarkable example of this fact. So far as can be inferred from his writings, his early training was rather in the direction of mathematical science, especially horology, than in that of astronomy. His first appearance as an active worker in

and is abundant in embryonic tissues ; its exact rôle cannot be defined. The relation of the element sodium to the organism is most problematical ; it may exert a stimulating effect upon protoplasm, or its presence in the substratum may facilitate beneficial chemical changes. It does not enter into the composition of the plant in appreciable quantity however. The bulletin does not give adequate treatment to the pure mechanical functions of salts in the maintenance of turgidity, and it might have gained in value to the agricultural experimenter by the delineation of lines of practical investigation to be followed. It is highly controversial in parts and one is impressed with the very great differences of conclusions which may be reached from a consideration of the same facts by a comparison with the sections of Pfeffer's *Plant Physiology* or any other publication treating the same subject.

D. T. MACDOUGAL.

Science Sketches: Chemistry its Evolution and Achievements. By FERDINAND G. WIECHMANN, PhD. New York, William R. Jenkins. 1899. Pp. vii + 176.

The study of the evolution of chemical science from its earliest beginnings possesses a fascinating interest. The author of this little book has endeavored so to present the subject as to make it useful to all who take a general interest in science. In matters which pertain to the development of chemistry before the nineteenth century the treatment is satisfactory. For the present century the book does not altogether succeed in tracing the *evolution* of the science. It seems rather to give a series of more or less isolated facts about the growth of chemical knowledge than to give a clear picture of the development of the science. Perhaps this should not be too severely criticised, for it is immensely difficult to give such a picture for the period in question.

If the theory that diamonds are extra-terrestrial in origin has actually been proposed by any one as suggested on p. 117, it must have arisen from a curious confusion as to Moissan's thought in the matter. Moissan says that in discovering the diamonds in the meteorites he has 'caught nature in the act,' meaning, not that the diamonds were in the meteorites as they

flew through space, but that they were formed during the passage of the meteorite through the air and its subsequent cooling. This thought seems to have guided Moissan in his successful production of diamonds.

In the discussion of liquid air the failure to mention the pioneers Cailletet and Pictet is remarkable. Some reference should also have been made to the Linde machines by which liquid air is now produced in quantity on essentially the same principle as that used by Tripler.

W. A. NOYES.

BOOKS RECEIVED.

Scientific Papers. PETER GUTHRIE TAIT. Cambridge, The University Press. 1900. Vol. II. Pp. 500.

Railroad Construction, Theory and Practice. WALTER LORING WEBB. New York, John Wiley & Sons; London, Chapman & Hull, Ltd. 1900. Pp. x + 456.

Introduction to Science. ALEXANDER HILL. London, J. M. Dent & Co. Pp. 140.

SCIENTIFIC JOURNALS AND ARTICLES.

THE April number (Vol. I., No. 2) of the *Transactions of the American Mathematical Society* contains the following articles : 'On the metric geometry of the plane n -line,' by F. Morley; 'On relative motion,' by Alexander S. Chessin; 'Plane cubics and irrational covariant cubics,' by Henry S. White; 'A purely geometric representation of all points in the projective plane,' by Julian Lowell Coolidge; 'The decomposition of the general collineation of space into three skew reflections,' by Edwin B. Wilson; 'A new method of determining the differential parameters and invariants of quadratic differential quantics,' by Heinrich Maschke; 'On the extension of Delaunay's method in the lunar theory to the general problem of planetary motion,' by G. W. Hill; 'On the types of linear partial differential equations of the second order in three independent variables which are unaltered by the transformations of a continuous group,' by J. E. Campbell.

THE May number of the *Bulletin* of the American Mathematical Society contains the following articles : 'On the geometry of the circle,' by Dr. Virgil Snyder; 'Isomorphism between
